## Fall/Winter 2007 Newsletter

Fall has officially arrived, the kids are back in school, the leaves are changing and beginning to fall off the trees and before we know it snow will cover the ground.

### Saturday Hours

*Turn Back Time Medispa* is now open the first Saturday of the month from 9:00am-1:00pm for appointments.

### New Products

We now carry PCA Skin's pHaze 25 ExLinea™ Peptide Smoothing Serum. PHaze 25 ExLinea Peptide Smoothing Serum is a technically advanced smoothing serum formulated with Argireline, a proven peptide that relaxes the facial tension that leads to wrinkling, while also reducing the depth of existing lines. The formulation has the added benefits of hyaluronic acid and plant polysaccharides to increase intracellular moisture, and a blend of antioxidants and advanced actives to fight free radicals and provide the skin with an immediate tightening and lifting effect.

When used in conjunction with Botox® and peels, aging around the eyes can be treated at the skin level by improving the skin color and texture and reducing the wrinkles. Schedule a complimentary consultation with one our trusted team so that we can customize a way to treat your eyes so that they look fresh and natural.

*Turn Back Time Medispa* now offers *Radiesse*®. *Radiesse*® is an FDA approved next generation cosmetic dermal filler. Several medical studies have shown *Radiesse*® is a longer lasting treatment to fill and correct smile lines, and wrinkles around the nose and mouth. *Radiesse*® is made of very small, unique calcium-based microspheres that are suspended in a natural, water-based gel that is injected into the skin. *Radiesse*® stimulates your skin to produce new collagen and encourages tissue regeneration, with immediate results. Please call us today to schedule your complimentary consultation at 847-681-8700.

### Turn Back Time with Dermal Fillers

Getting that youthful look is not all about Botox®. As we age we loose fat, collagen, develop brown spots and broken blood vessels. In addition, some of the fat shifts positions, giving us an extra fold of skin between the nose and the corners of the lips.

### Turn Back Time with Dermal Fillers (cont.)

Muscle action that initially gave us lines that only showed up when we animated our faces soon become static lines or wrinkles. Our first reaction is to have the lines or wrinkles treated, but this is only a small part of the solution. It is very important that we restore the volume under the skin that used to be there.

Luckily, there are a whole host of agents that are used to fill in the deficits created by the loss of fat and collagen. These fillers or "injectables" add volume under the skin, which then plumps up the skin, removing some of the lines or wrinkles that were previously apparent. Additional benefits of dermal fillers are they are non-surgical (or minimally invasive) procedures that are simple, and quick, with few side effects. Furthermore, fillers are relatively affordable, don't interfere with your lifestyle, and can make you appear instantly revitalized and refreshed.

Botox® is still a useful agent as it relaxes the muscles underneath the skin and prevents the dynamic lines from becoming static lines. In addition, studies have found that when Botox® is used, any resurfacing procedures like intense pulsed light or laser treatments actually provide results that last longer than if the same procedure was performed when Botox® has not been used on the underlying muscles.

We, at *Turn Back Time*, offer a variety of dermal fillers and volumizers to choose from. When you schedule your complimentary consultation, our provider's will help you choose the appropriate dermal filler, whether it be Restylane®, Perlane®, or Radiesse® or Sculptra®.

Here at *Turn Back Time*, we are committed to helping you achieve the more youthful look that you desire. As a result, over the next few months we are offering a number of financial incentives to make you "holiday ready!" Please call 847-681-8700 to make an appointment and check our webpage for all the details!
